Phonetics

- Phonetics is the study of the sounds that we make when we speak.
- For example, the word **dog** is made of three sounds put together: d-o-g. Speak the word aloud as shown in Hindi to help you pronounce it correctly

ड + ौ + ग = डौग .

- The word **cat** is made of three other sounds: c-a-t. Speak the word aloud as shown in Hindi to help you pronounce it correctly

क + ै + ट = कैट

Types of sounds

Different Sounds in English

Vowels	Diphthongs (combination sound of two vowels)	Consonants
The English alphabet has five vowels (a, e, i, o and u) but 12 vowel sounds. This means most vowels can be pronounced in different ways. We make a vowel sound when we read a vowel in a word.	We make a diphthong sound when we combine two vowels. Diphthongs start as one vowel sound and go to another.	A consonant sound is any sound that is neither a vowel nor a diphthong sound.
For example, we pronounce the letter 'i' in the word 'bit' by using a vowel sound. In Hindi it is बिट	For example, the sound 'ou' in the word "house" is a diphthong or a combination. In Hindi, it is हाऊस	For example, we use consonant sounds to say the letters 'p' and 't' in the word Pot. In Hindi is पॉट
Say the word 'bit' aloud and listen to how you are saying the vowel sound.	Say the word 'house' aloud and listen to how you are saying the diphthong.	Say the word 'pot' aloud and listen to how you are saying the consonant sounds.
